

1. Let  $A$  and  $B$  be uncountable sets with  $A \subseteq B$ . Prove or disprove:  $A$  and  $B$  are equinumerous.

$$B = 2^{\mathbb{R}} \leftarrow \text{larger than } \mathbb{R}$$

$$A = \{ \{x\} \mid x \in \mathbb{R} \} \leftarrow \text{equinumerous with } \mathbb{R}$$

2. Let  $A$  be an uncountable set and  $B$  a countably infinite subset of  $A$ .  
 Prove/Disprove:  $A$  is equinumerous with  $A-B$ .

True       $|A-B| \overset{\checkmark}{\leq} |A|$        $|A| \overset{?}{\leq} |A-B|$

$A-B$  uncountable

$\Rightarrow A-B$  is infinite.

$$f: A \rightarrow A-B$$

injective

$$C \subseteq A-B$$

countable

$$B = \{b_1, b_2, b_3, \dots\}$$

$$C = \{c_1, c_2, c_3, \dots\}$$

$$f(a) = \begin{cases} c_{2n-1} \\ c_{2n} \\ a \end{cases}$$

if  $a = c_n$   
 if  $a = b_n$   
 otherwise

$f$  is a  
 bijection.

3. Prove that the real interval  $[0,1)$  is equinumerous with the unit square  $[0,1) \times [0,1)$ .

$$\overline{A} = \mathbb{Q} \cap [0, 1)$$

$$A = [0, 1) - \overline{A}$$

$$B = [0, 1) \times [0, 1) - \overline{A}^2$$

$$f: B \rightarrow A$$

$$(0.a_1a_2a_3 \dots, 0.b_1b_2b_3 \dots)$$

$$\mapsto (0.a_1b_1a_2b_2a_3b_3 \dots)$$

4. Define a relation  $\sim$  on  $\mathbb{R}$  such that  $a \sim b$  if and only if  $a - b \in \mathbb{Q}$ .
- (a) Prove that  $\sim$  is an equivalence relation.
  - (b) Is the set  $\mathbb{R}/\sim$  of all equivalence classes of  $\sim$  countable?

$$[x] = \{x + a \mid a \in \mathbb{Q}\} \quad \begin{array}{l} \text{equinumerous} \\ \text{with } \mathbb{Q} \end{array}$$

countable

uncountable

5. Let  $\mathbb{Z}[x]$  denote the set of all univariate polynomials with integer coefficients. Prove that  $\mathbb{Z}[x]$  is countable.

$$\begin{array}{c}
 \deg(f) = d \\
 \hline
 \text{d constant} \quad a_0 + a_1 x + \dots + a_d x^d \\
 \quad \quad \quad \uparrow \quad \quad \quad \uparrow \quad \quad \quad \dots \quad \quad \quad \uparrow \\
 \quad \quad \quad \text{countable}
 \end{array}$$

$$\mathbb{Z}[x] = \left( \bigcup_{d \geq 0} \{f \mid \deg(f) = d\} \right) \cup \{0\}$$

6. A real or complex number  $a$  is called algebraic if  $f(a) = 0$  for some non-zero  $f(x) \in \mathbb{Z}[x]$ . Let  $A$  denote the set of all algebraic numbers. Prove that  $A$  is countable.

$\deg(f) = d \Rightarrow f$  can have at most  $d$  roots.

$A =$  a countable union of finite sets

7. Let  $Z[x,y]$  be the set of all bivariate polynomials with integer coefficients.

(a) Prove that  $Z[x,y]$  is countable. *similar to  $Z[x]$*

(b) Let

$$V = \{(a,b) \in \mathbb{C} \times \mathbb{C} \mid f(a,b) = 0 \text{ for some nonzero } f(x,y) \in Z[x,y]\}$$

Is  $V$  countable?

$$x - y$$

$V$  contains the uncountable subset

$$\{(a,a) \mid a \in \mathbb{C}\}$$

8. A set  $S \subseteq \mathbb{R}$  is called bounded if  $S$  has both a lower bound and an upper bound. Countable/Uncountable?

(a) The set of all bounded subsets of  $\mathbb{Z}$ .

(b) The set of all bounded subsets of  $\mathbb{Q}$ .

Let  $A$  be a bounded set. Let  $l$  be a lower bound, and  $u$  an upper bound. Let  $B = [l, u] \cap S$ .  $A$  can be any subset of  $B$ . For  $S = \mathbb{Z}$ ,  $B$  is finite. For  $S = \mathbb{Q}$ ,  $B$  is countable (and infinite if  $l < u$ ).
